

EXPERIENCE

Microsoft

Senior Software Engineer

2022 – Present
Fabric Spark Team

- Built a Spark Diagnostic Agent from 0 to 1 that delivers in-line code optimization, error-fix suggestions, and performance tuning.
- Curated 300+ test cases from thousands of production ICMs into a reproducible evaluation harness that benchmarks diagnostic accuracy and guards against regressions across model and prompt iterations.
- Designed Spark Run Series Analysis — automated categorization of recurring Spark jobs with duration/I/O trend visualization, outlier detection, and root-cause attribution; published at [VLDB 2025](#).
- Architected Spark Advisor, a real-time engine that analyzes executing Spark commands and surfaces optimization hints in notebook output.
- Contributed core Spark skills to [microsoft/skills-for-fabric](#) and exposed the Spark History Server as an MCP server plus a REST API via Apache Livy, enabling AI agents to author, debug, optimize, and programmatically submit Spark workloads in Microsoft Fabric.

JD.com

Senior Software Engineer

2020 – 2022
Advertising Data Team

- Owned JD.com's foundational advertising data, ingesting real-time impression/click/spend data from on-site Jingzhuntong and off-site channels — Tencent GDT, ByteDance Ocean Engine, Baidu, Google, and Meta.
- Built a real-time Flink compute pipeline processing 1B+ ad events daily with exactly-once semantics and plug-gable sources/sinks at sub-30 s latency, powering three core scenarios: real-time impression/click/spend analytics and BI, ad-budget overspend control (real-time stop-loss), and financial billing and settlement reconciliation.
- Built a Customer Data Platform with OneID identity resolution, unifying cross-channel user profiles to improve ad-targeting precision and campaign ROI.

Xiaomi

Software Engineer

2018 – 2020
Data Platform Team

- Built ETL pipelines processing billions of daily events across Xiaomi's core business data streams, providing a unified, reliable data foundation for downstream analytics and recommendation.
- Built Xiaomi's video recommendation system from 0 to 1 — spanning feature engineering, candidate recall, and ranking — significantly improving content click-through rate and user engagement.
- Introduced a self-service BI system that lets business teams build reports via drag-and-drop, turning report delivery from an engineering-backlog dependency into minute-level self-service.

AskingData

Software Engineer

2016 – 2018
Data Team

- Built high-throughput web crawlers collecting billions of e-commerce records daily and designed an anti-crawler defense system to protect proprietary data assets.

TECHNICAL SKILLS

AI	Agent, RAG, MCP, Prompt
Big Data	Spark, Flink, Hadoop, Hive, HBase, Lakehouse
Databases	MySQL, Redis, MongoDB, Cosmos DB
BI & Analytics	Power BI, Superset, Redash, Google Analytics
Languages	Java, Python, Scala, C#

EDUCATION

Huazhong University of Science and Technology	Bachelor	2012 – 2016
---	----------	-------------
